

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- (L) 10 minutes to prepare
- 1 hour to collaborate
- **2-8 people** recommended

Share template feedback

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

① 10 minutes

Team gathering

Set the goal

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

Think about the problem you'll be focusing on solving in the brainstorming session.

Learn how to use the facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

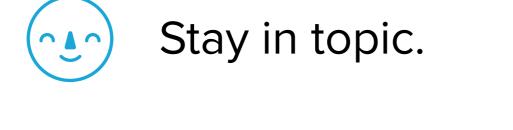

PROBLEM

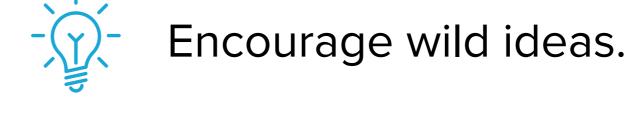

Real-time river water quality monitoring and control system

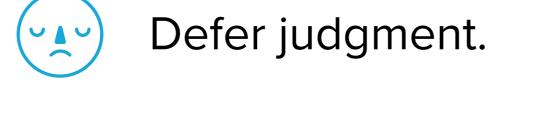

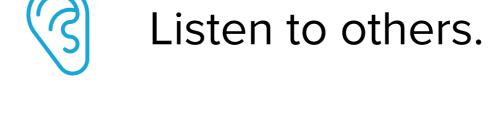

Key rules of brainstorming

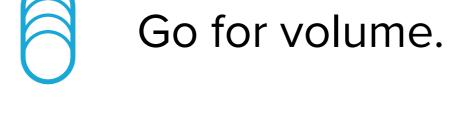

To run an smooth and productive session

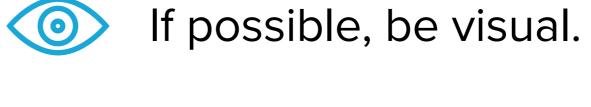

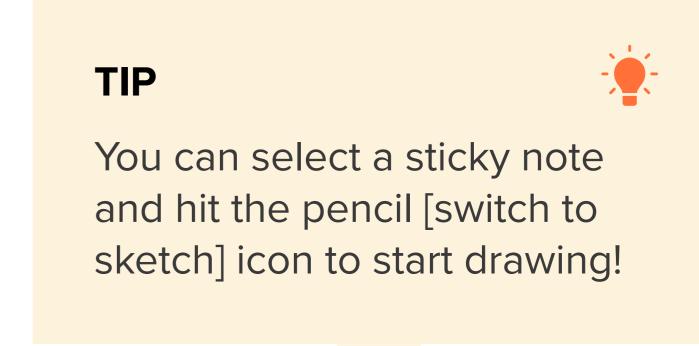

Brainstorm

Write down any ideas that come to mind that address your problem statement.

① 10 minutes

VINUPRIYA K P Evaluating the The timeline of Each data needs effect of to be in different substantial measures to measurements nutrient loads on analyse the must be overall water quality recorded. quality Turbidity sensor The data mining The data techniques will be can be used.It is distribution in the used for applying the testing data should a measure of classification method not affect the cloudness of for water quality training data set. water. application

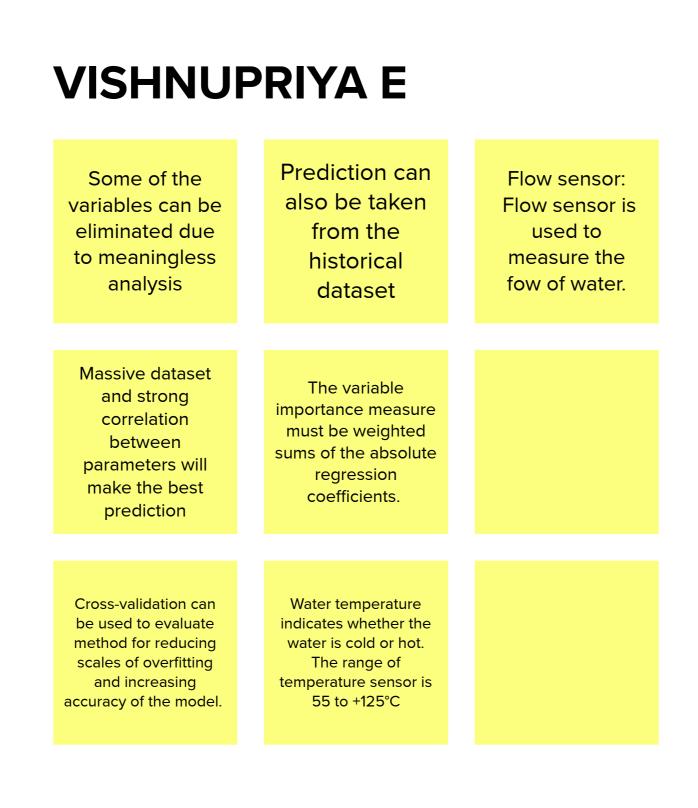

Chlorine sensor is

designed to

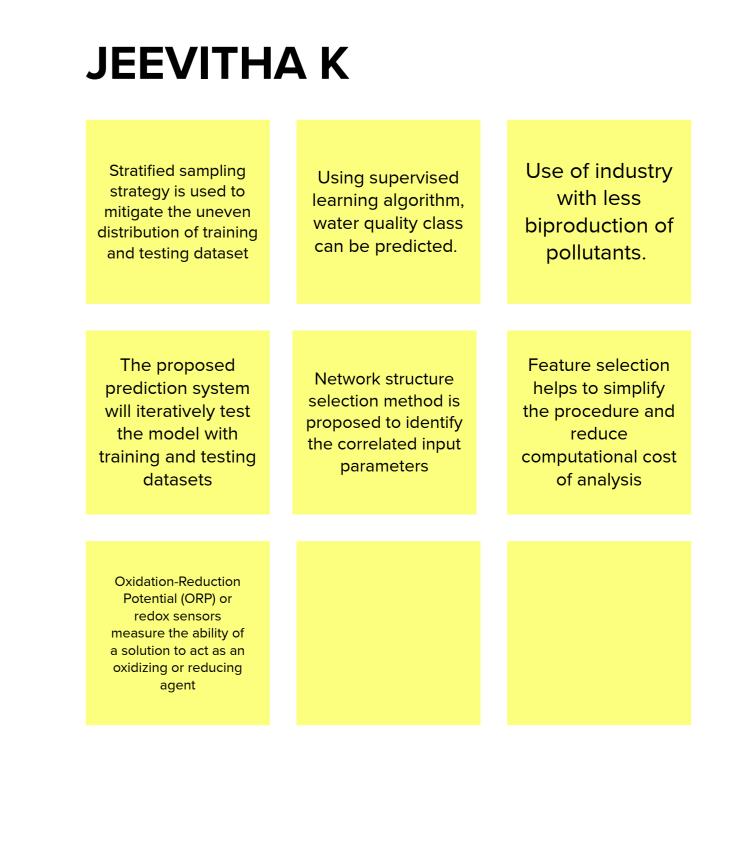

measure the

in a solution.

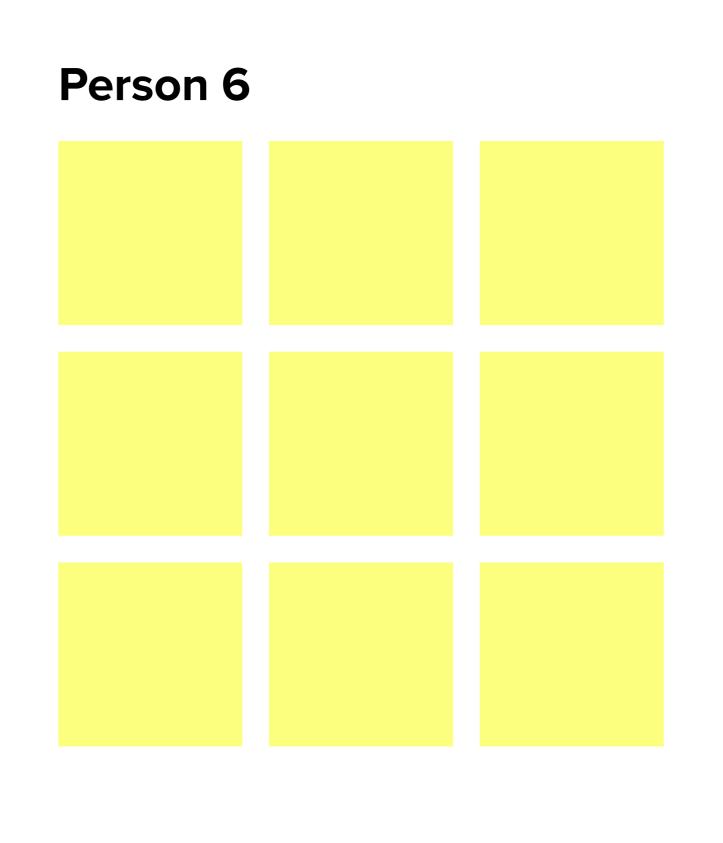

amount of chlorine

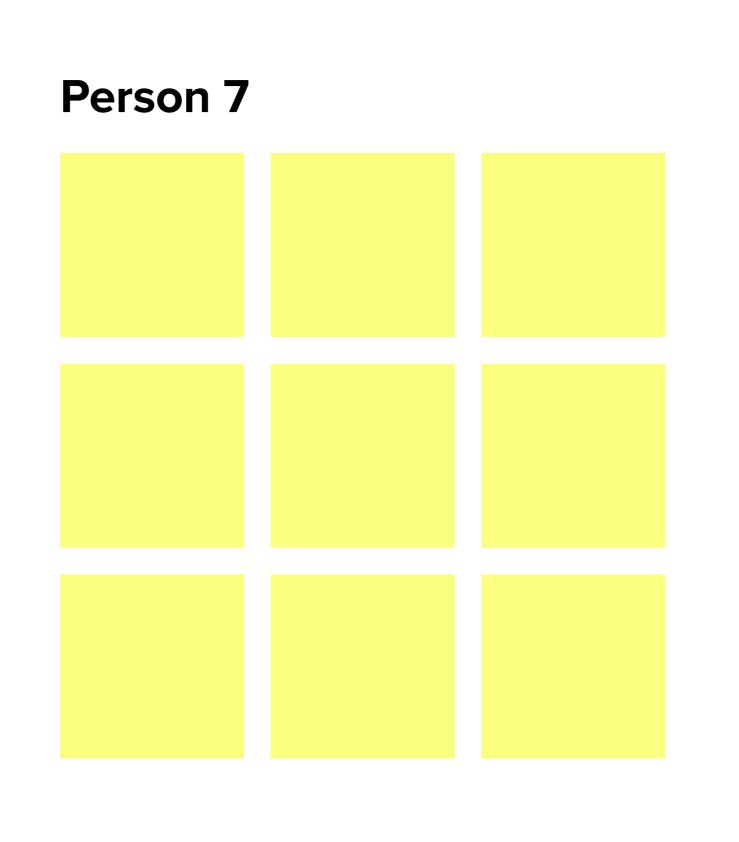

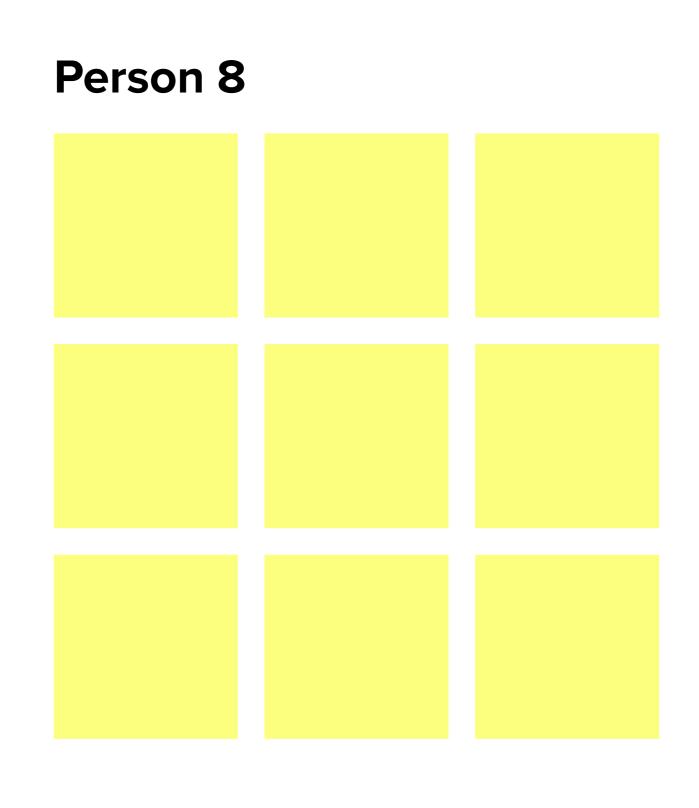

Use of minimal number of parameters with cheap sensors to predict water quality.	The size of training datasets should not be less than the number of training parameters required in the model.	Accurate model can be selected based on the outcome in the model evaluation
General filteration of waste water samples.	Keep the data design	Machinized bulk water purifier with less time consumption.
Water conductivity sensors are used in water-quality applications to measure how well a solution conducts an electrical current		

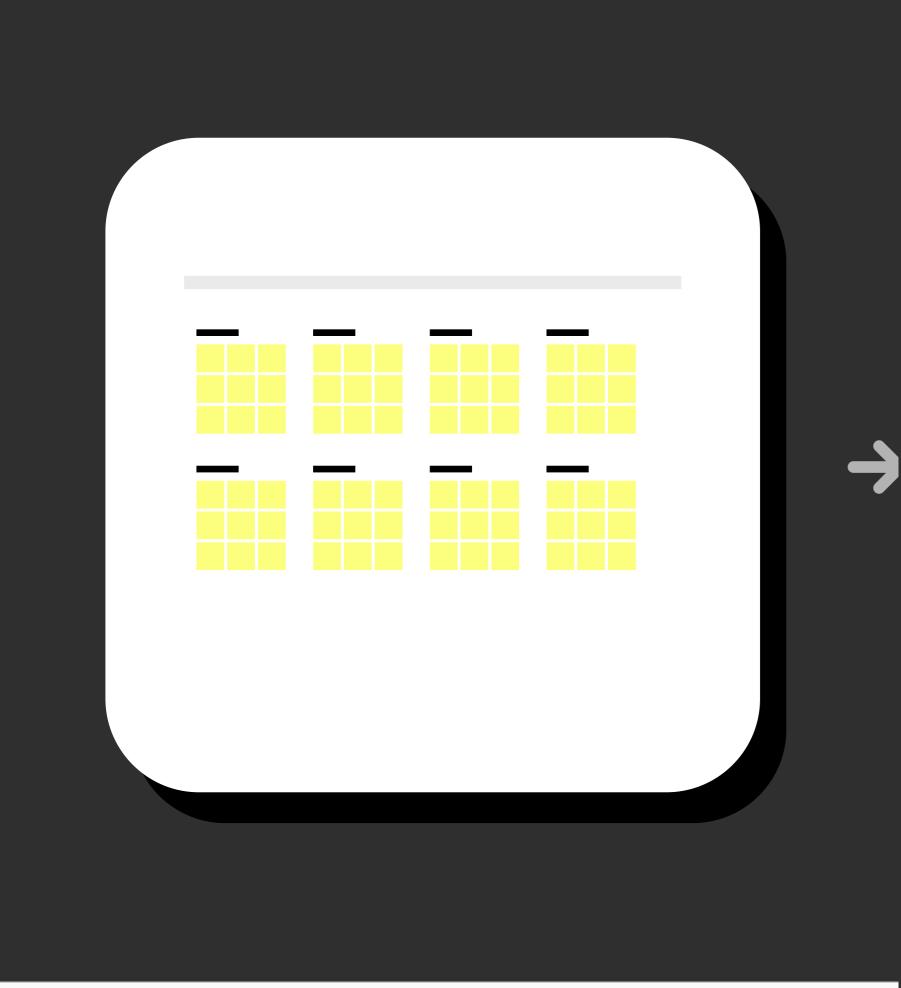

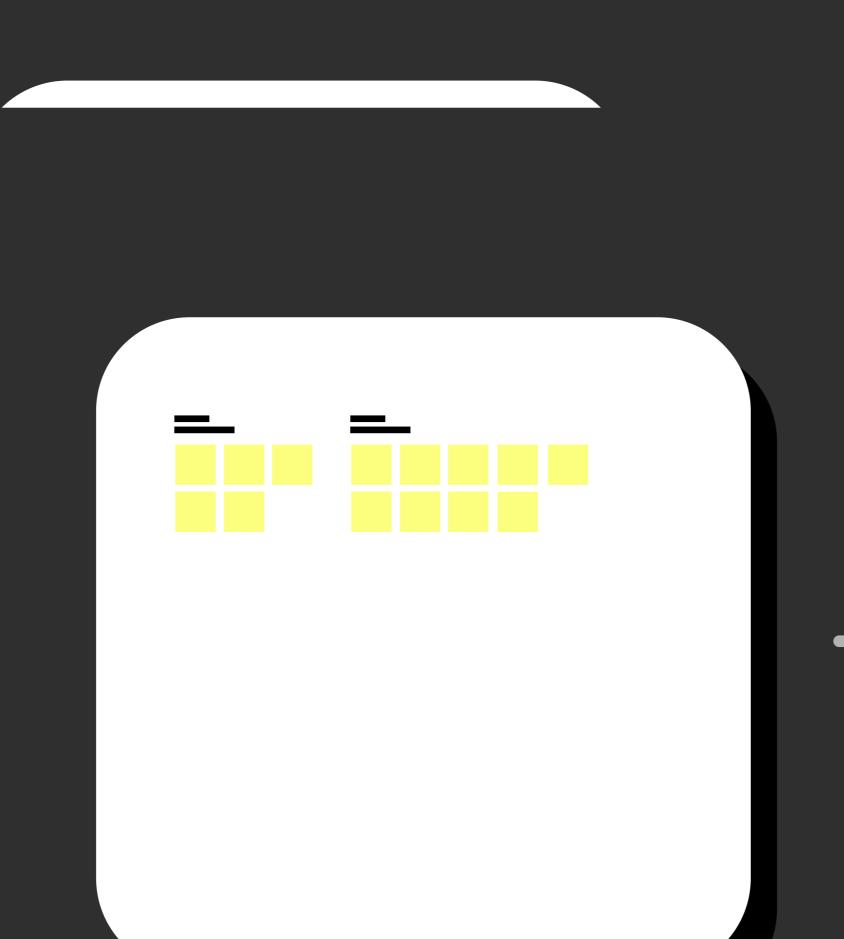

MONISHA R		
A method like neuro-fuzzy interference system can be implemented which is capable of integrating linear and non-linear relationships in dataset	Parameters like temperature, turbidity, pH and dissolved solids can be used.	Data modelling to use the past dataset to inform the future effort
Variable importance analysis can increase the accuracies of the models.	Use pH meter for sensing the pH value of the water.	Various techniques can be included to predict the quality within the application.
chemical oxygen demand (COD sensor)		

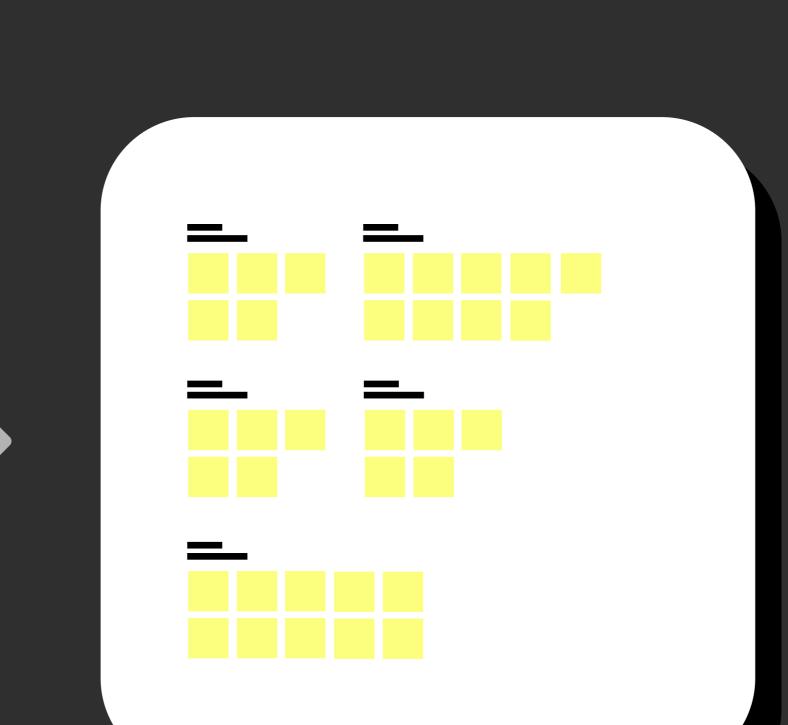

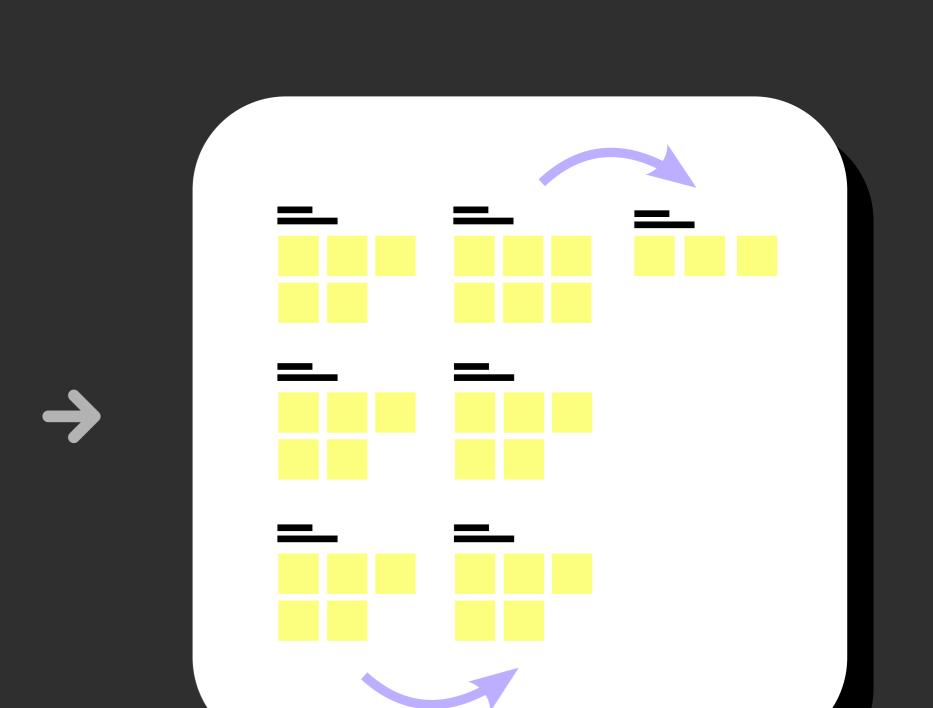

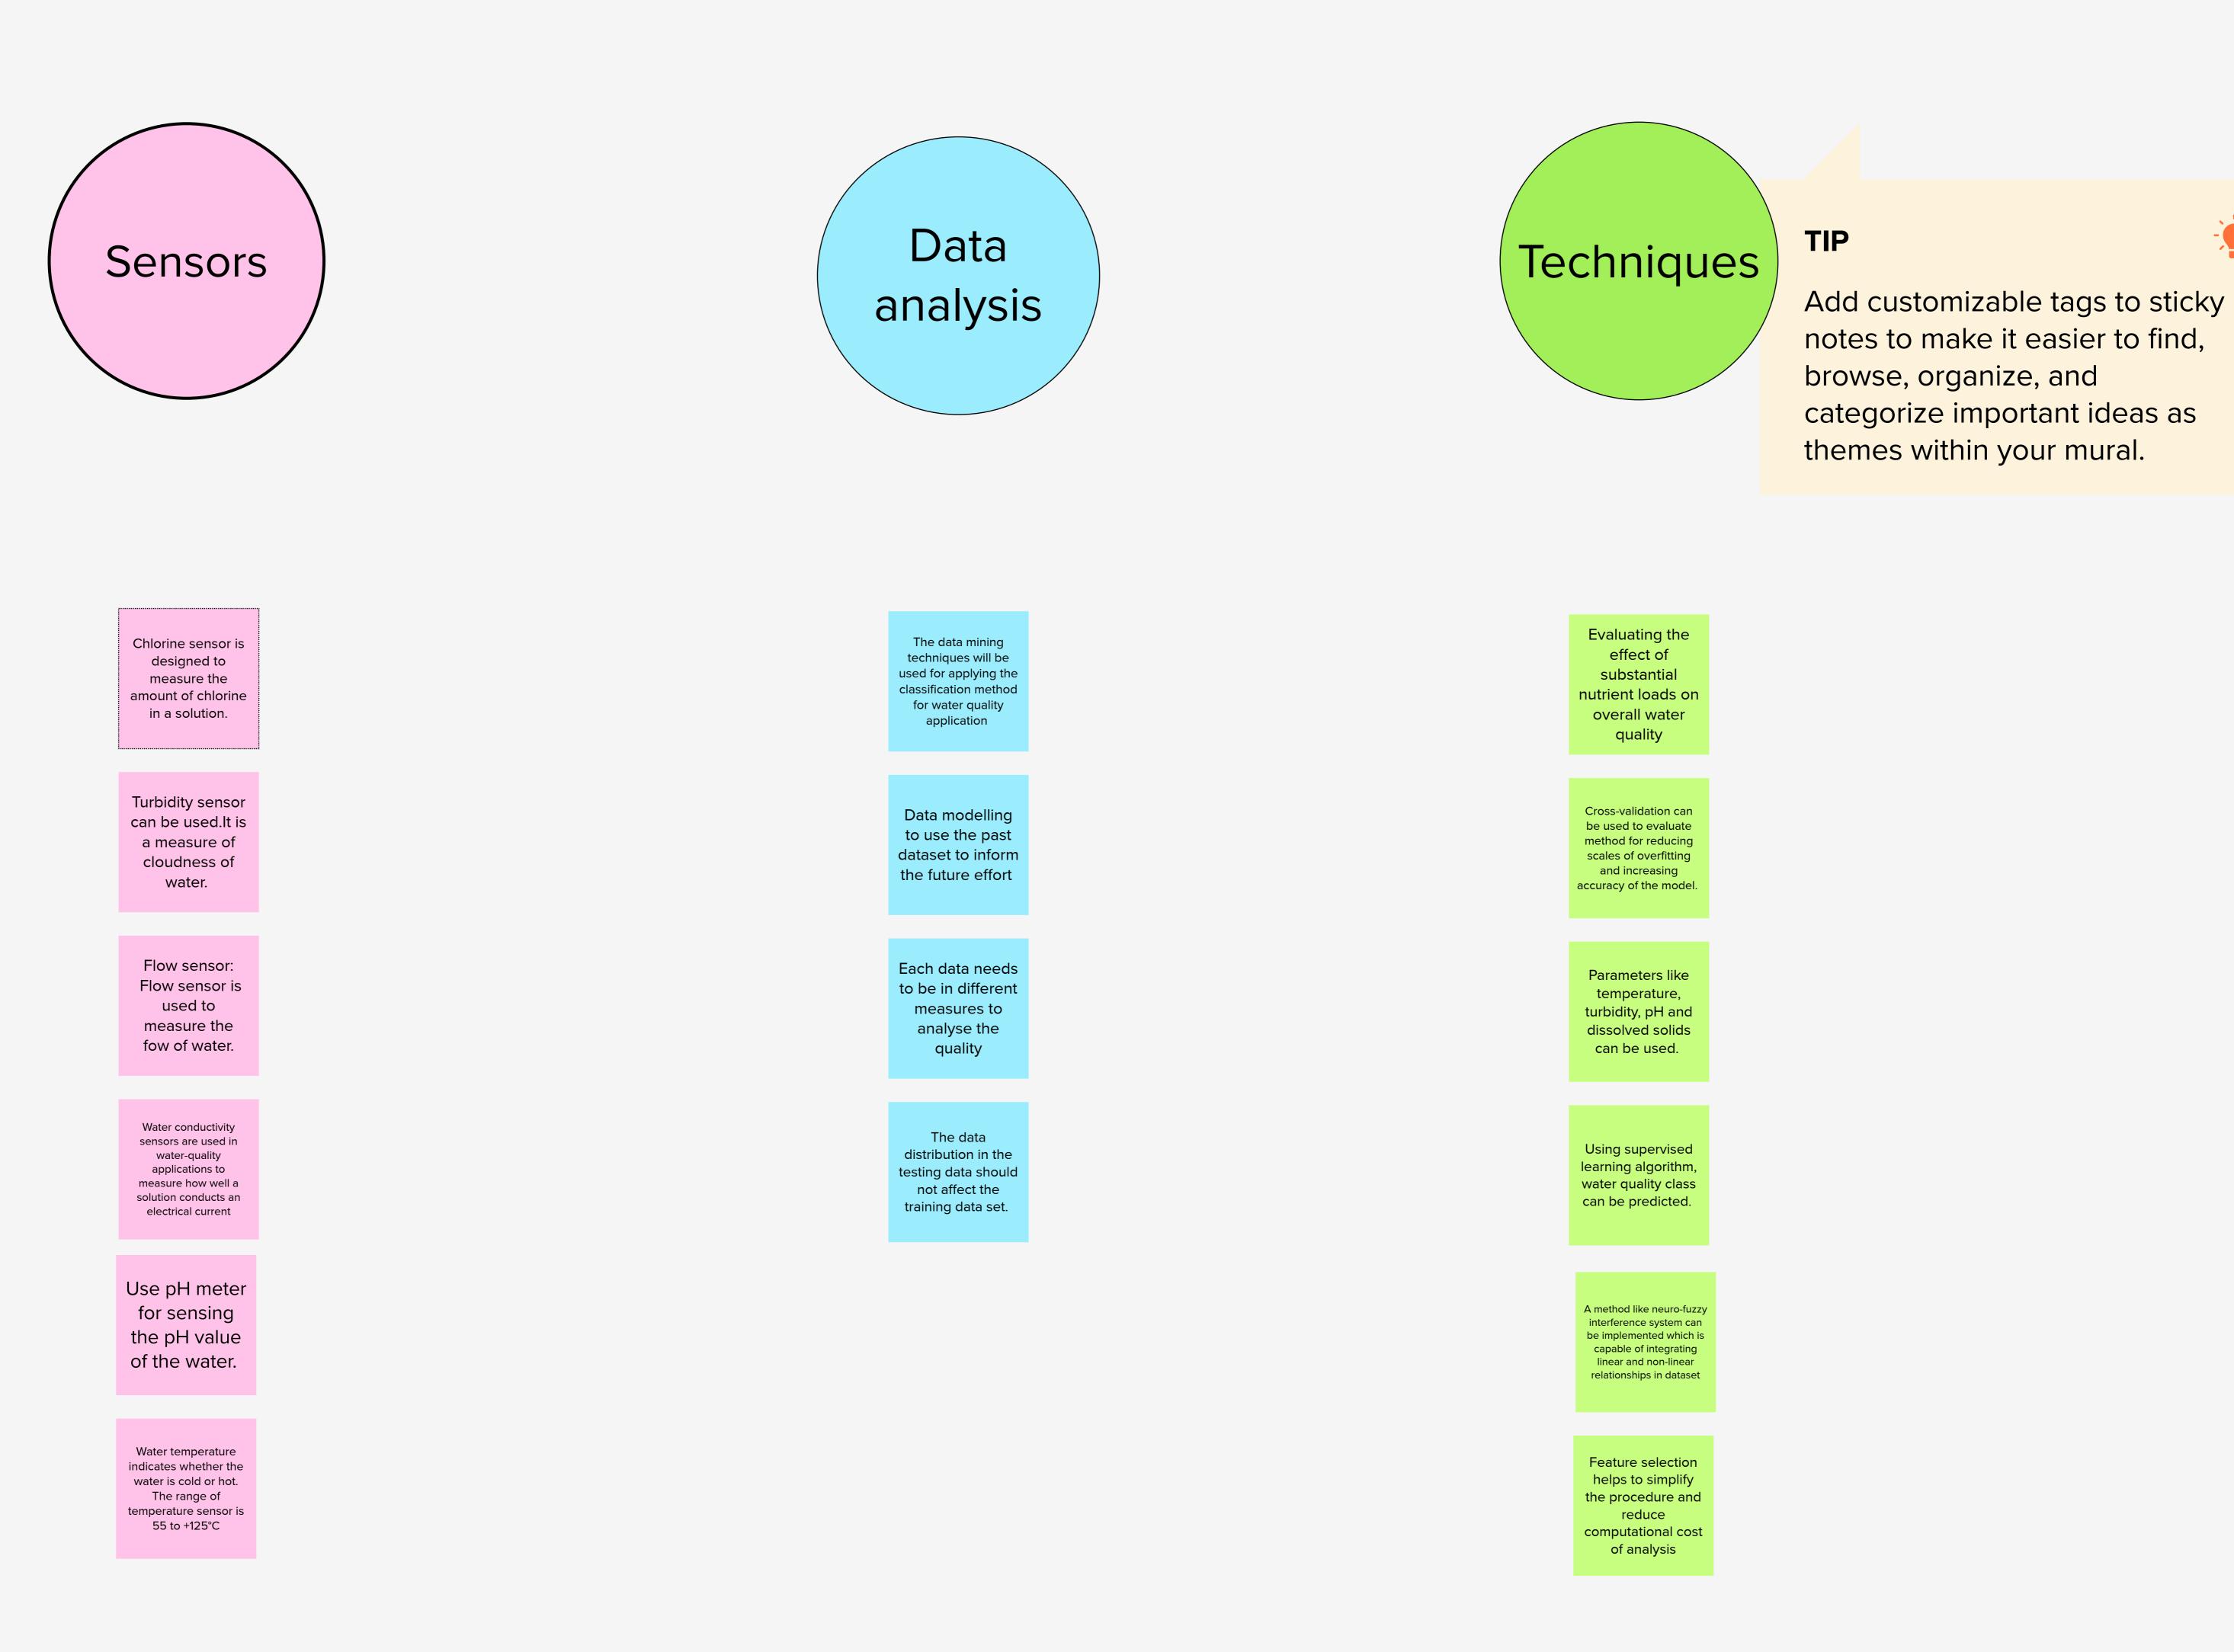

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you and break it up into smaller sub-groups.

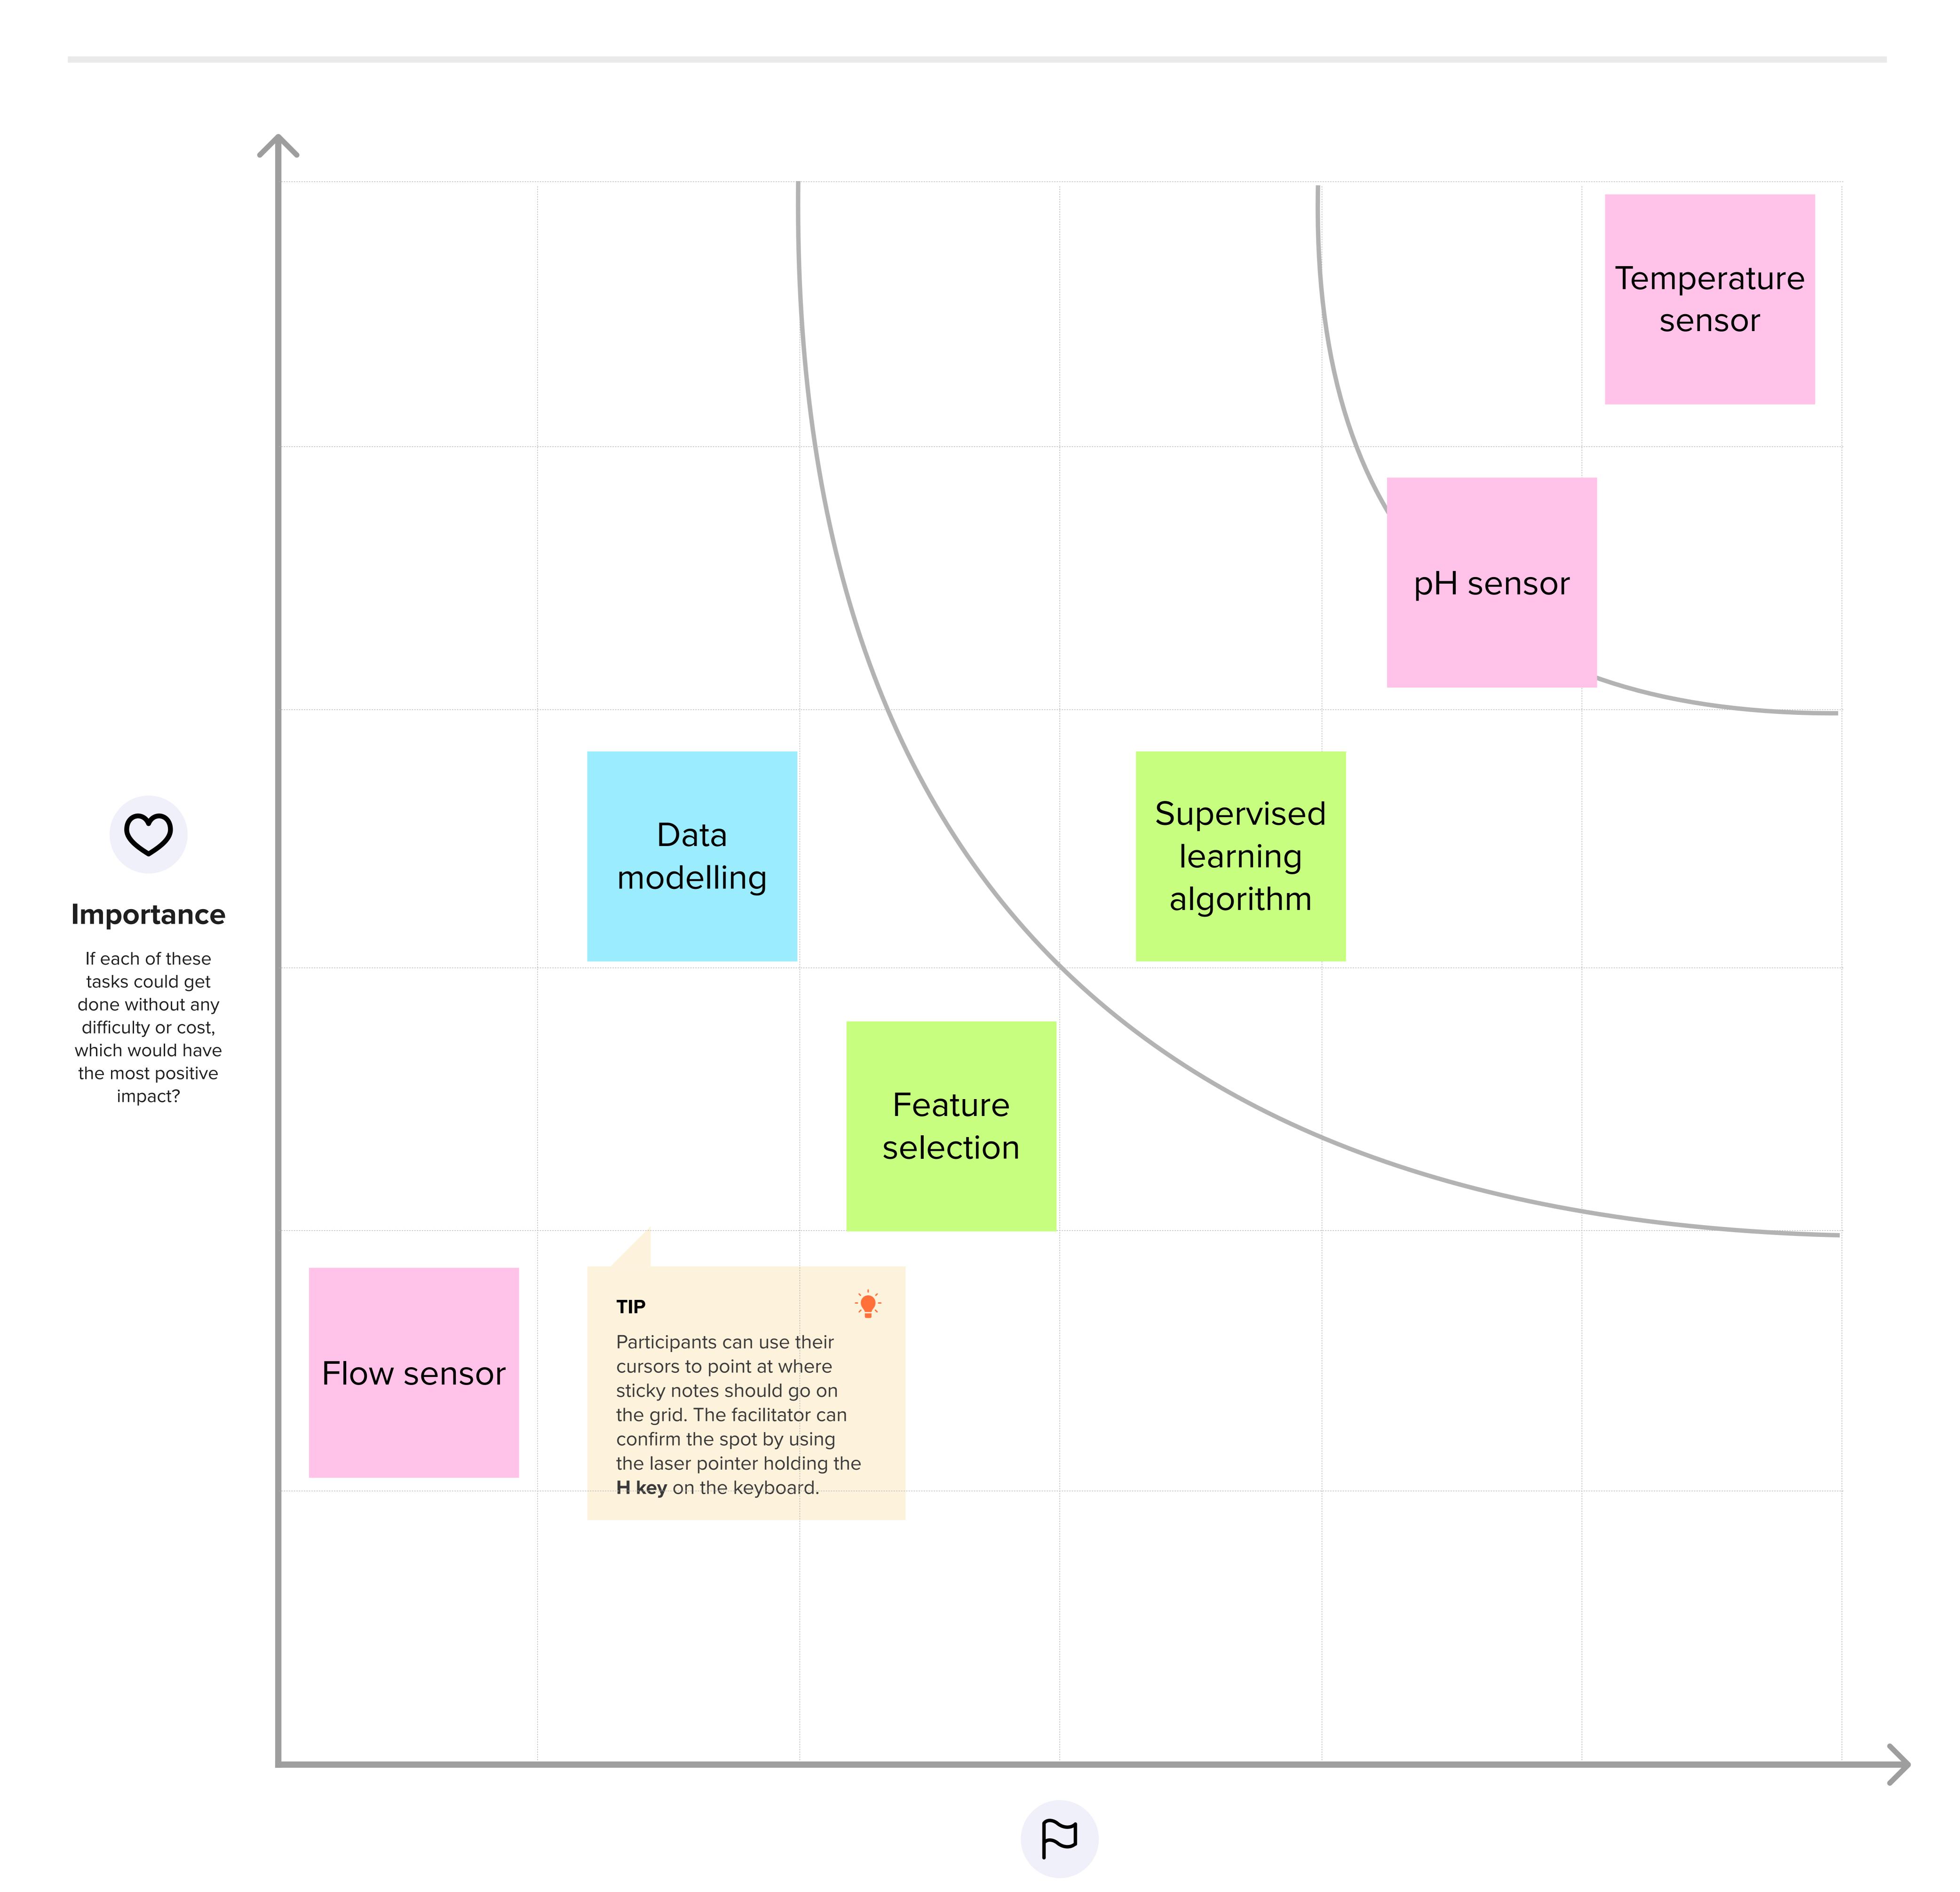

Prioritize

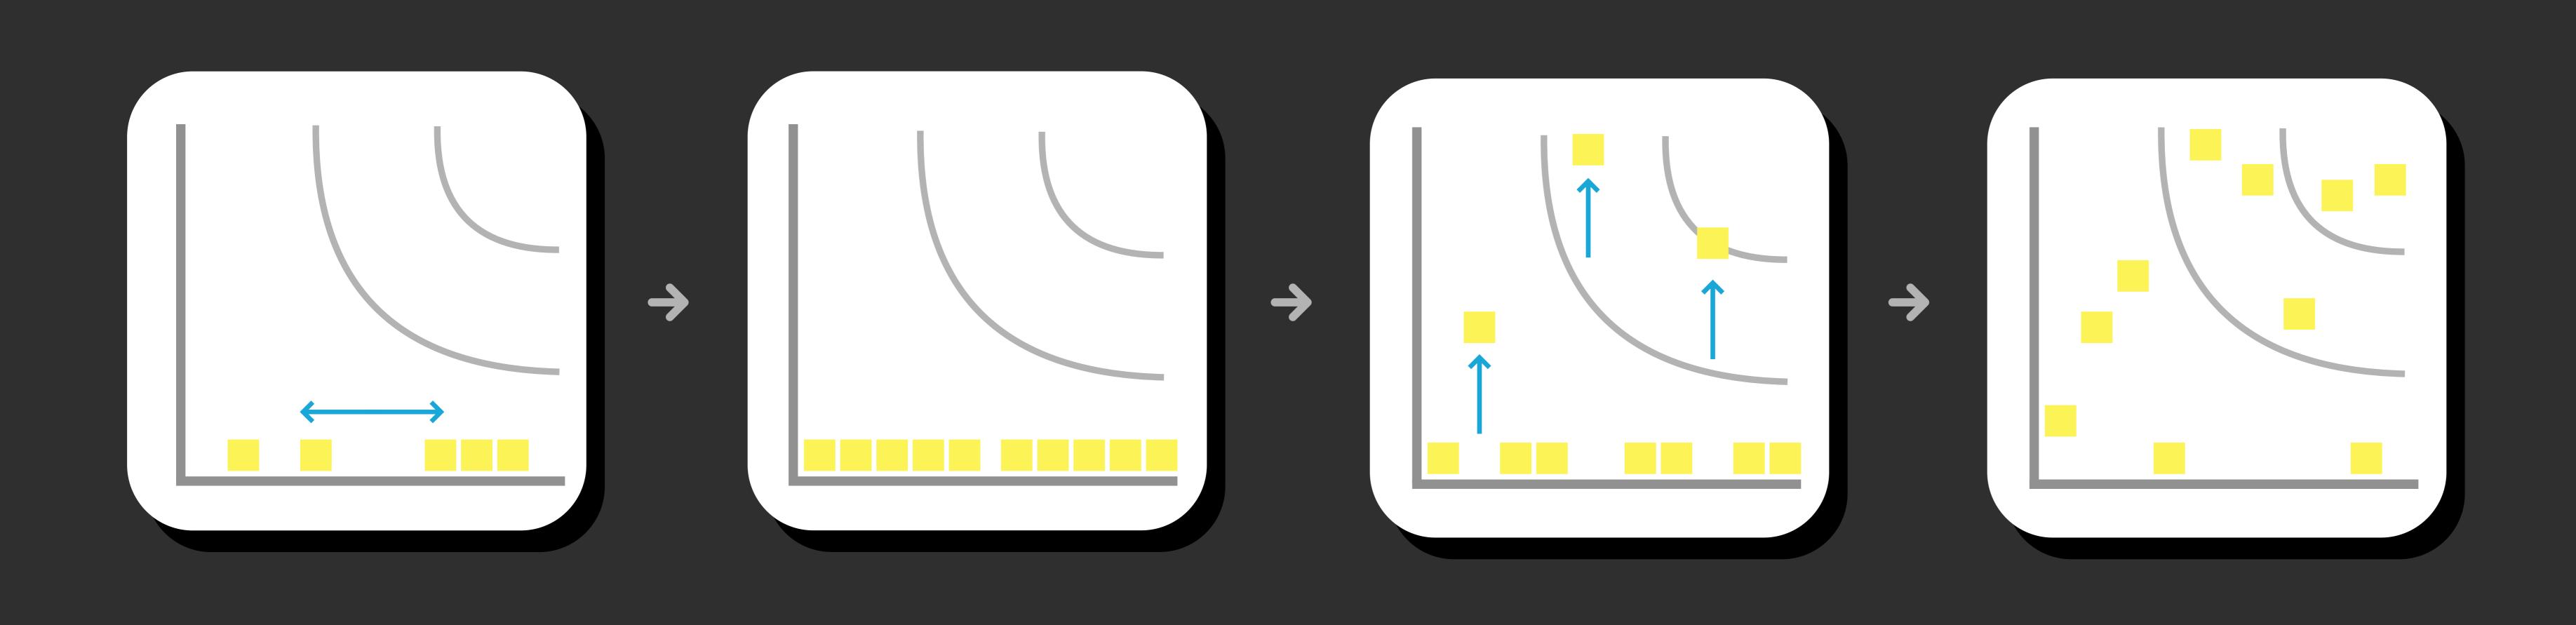

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

① 20 minutes

Feasibility

Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)

After you collaborate

You can export the mural as an image or pdf to share with members of your company who might find it helpful.

Quick add-ons

Share the mural

Share a view link to the mural with stakeholders to keep them in the loop about the outcomes of the session.

В

Export the mural

Export a copy of the mural as a PNG or PDF to attach to emails, include in slides, or save in your drive.

Keep moving forward

Strategy blueprint

Define the components of a new idea or strategy.
